SKILLS

- Computer Vision & Deep Learning
- Medical Image Processing
- PyTorch & ResNet-18
- Python & Scrapy
- Web Scraping
- LaTeX Documentation

LANGUAGES

- English (Fluent)
- Hindi (Native)

ABOUT ME

Passionate 2nd-year B.Tech CSE student with hands-on experience in Computer Vision and Deep Learning for medical applications. Skilled in training PyTorch models (ResNet-18) and web scraping using Scrapy and Python. Proficient in leveraging high-performance computing for heavy computational tasks and data mining

PROJECTS

Pneumonia Detection System

- Developed a deep learning-based medical image processing system using ResNet-18 and PyTorch to detect pneumonia from chest X-rays.
- Built cross-language integration between a Python ML backend and Java Swing GUI using ProcessBuilder.
- Implemented crash-proofing mechanisms to prevent RAM leaks during heavy computational workloads.

Automated Web Extraction Engine & Data Pipeline

- Engineered a scalable web scraping ecosystem using the Scrapy framework to extract and process structured data from e-commerce platforms.
- Developed custom spiders to navigate complex site architectures and implemented Item Pipelines for real-time data cleaning, validation, and storage in MySQL/JSON formats.
- Integrated Middleware for user-agent rotation and proxy management, successfully bypassing anti-bot measures to ensure reliability at scale.
- Executed a full-cycle ETL process, resulting in a structured dataset of 1,000+ products with attributes like pricing, stock availability, and ratings.

EDUCATION

Bachelor of Technology 2024-2028

Computer Science and Engineering | CSJM University
